

# GIVING BEEKEEPING GUIDANCE BY COMPUTATIONAL-ASSISTED DECISION MAKING

B-GOOD will pave the way towards healthy and sustainable beekeeping within the European Union by following a collaborative and interdisciplinary approach. Merging data from within and around beehives as well as wider socio-economic and ecological conditions, B-GOOD will develop and test innovative tools to perform risk assessments according to a novel Health Status Index (HSI).

B-GOOD has the overall goal to provide guidance for beekeepers and help them make better and more informed decisions.
